

Smarter mileage tracking

Meet Simon

Simon works in sales and often travels for work.

Tracking mileage

The GPS receiver in Simon's car automatically detects when he starts and finishes a journey.

All information is saved

Our mileage tracker saves dates, times, and mileage. So Simon doesn't have to keep track of the details himself.

Automatic transmission

Simon's journey data is automatically transmitted to Companyexpense along with all his other expenses and per diems for his trip. Everything in one place.

Travel expense reporting

Simon opens the app and selects the trips he wants to include in his report. He taps Save and submits the report, including mileage, expenses, and per diems.

Approvals

Simon's manager, Elin, gets a message on her phone that she has an expense report to approve. She reviews it and approves it.

Accounting

Once Elin has approved Simon's report, it is forwarded for posting and reimbursement.

We keep track of current regulations

Your finance team doesn't need to keep track of the Tax Agency's regs for mileage as this is already part of our service.
